

Workbook for ASP.Net

A beginner's guide to effective programming

Why This Module

Static Web pages, which display the same content each time a user views them are not relevant in today's scenario. A Web page needs to display dynamic Web content in order to attract the Web community to revisit the Web page.

The content of dynamic Web pages changes every time they are displayed to a user. Some examples of dynamic Web pages are the pages that display the current weather forecast or display current sales items. Such Web pages display the most current information each time a visitor revisits the page.

Active Server Pages.NET (ASP.NET) is the language used for creating dynamic Web pages.

Active Server Pages allow the creation of Web pages containing a set of standard HTML elements, such as tables and text, and scripting elements, such as database fields and date/time information for dynamic generation of the Web page each time it is requested from a browser. When a browser requests an ASP.NET page, the page is processed by the Internet Information Server (IIS).

In this module, participant will be introduced to ASP.NET applications. They will learn about the components of an ASP.NET Web page. Then, students will learn to create Web applications for displaying dynamic data. In addition, you will also learn to configure, debug, and deploy ASP.NET Web applications

Contents

1.0 Introduction to ASP .Net	8-27
-------------------------------------	-------------

1.1 ASP .Net Framework	9
1.2 ASP .Net Architecture	14
1.2 Visual Studio .Net Overview	18
1.3 ASP .Net Application Folder	25
1.5 Crossword	27

2.0 Creating ASP .Net Web Form	28-67
---------------------------------------	--------------

2.1 Web Forms	29
2.2 Master Pages	36
2.3 Server Controls	44
2.4 Data Bound Controls	50
2.5 Themes and Skins	60
2.6 Crossword	67

3.0 Adding code to ASP .Net Web Form	68-91
---	--------------

3.1 Inline Coding and Code Behind Model	69
3.2 Manipulating Pages and Server Controls	75
3.3 Event Procedure to Web Server Control	80
3.4 Crossword	91

4.0 Tracing in ASP.Net Web Application	92-105
---	---------------

4.1 Tracing	93
4.2 Debugging	99
4.3 Crossword	105

5.0 Validation User Input	106-120
----------------------------------	----------------

5.1 Validation Controls	107
5.2 Crossword	120

6.0 Creating User Controls **121-130**

6.1 User Controls	122
6.2 Custom Controls	126
6.3 Crossword	130

7.0 Accessing Relational Data using Visual Studio.NET **131-158**

7.1 ADO.Net Overview	132
7.2 Accessing Data using ADO.Net	136
7.3 Stored Procedures	146
7.4 Reading and Writing XML Data	151
7.5 Crossword	158

8.0 Managing State **159-186**

8.1 State Management	160
8.2 Client-Side State Management	162
8.3 Server-Side State Management	174
8.4 Global.asax	181
8.5 Crossword	186

9.0 Configuring, Optimizing ASP.Net Web Application **187-210**

9.1 Caching	188
9.2 Web.Config and Machine.Config	199
9.3 Custom Error Handling	205
9.4 Crossword	210

10.0 Securing ASP.Net Web Application **211-246**

10.1 Web Application Security	212
10.2 MMC Snap-In	226
10.3 Website Administration Tool	229
10.4 Web Parts	238
10.5 Crossword	246

11.0 Deploying an ASP.Net Web Application	247-263
--	----------------

11.1 Creating and Deploying Web Setup Project	248
11.2 Web Services	254
11.3 Crossword	263

****Answers for Crosswords** **264**

**** Contributors** **265**
