# Contents

<b>I Background</b>	<b>1</b>
<b>1 Introduction</b>	<b>2</b>
1.1 Operating System Functionality . . . . .	2
1.2 Abstraction and Virtualization . . . . .	6
1.3 Hardware Support for the Operating System . . . . .	8
1.4 Roadmap . . . . .	14
1.5 Scope and Limitations . . . . .	16
Bibliography . . . . .	17
<b>A Background on Computer Architecture</b>	<b>19</b>
<b>II The Classics</b>	<b>23</b>
<b>2 Processes and Threads</b>	<b>24</b>
2.1 What Are Processes and Threads? . . . . .	24
2.1.1 Processes Provide Context . . . . .	24
2.1.2 Process States . . . . .	27
2.1.3 Threads . . . . .	29
2.1.4 Operations on Processes and Threads . . . . .	34
2.2 Multiprogramming: Having Multiple Processes in the System . . . . .	36
2.2.1 Multiprogramming and Responsiveness . . . . .	36
2.2.2 Multiprogramming and Utilization . . . . .	39
2.2.3 Multitasking for Concurrency . . . . .	41
2.2.4 The Cost . . . . .	41
2.3 Scheduling Processes and Threads . . . . .	42
2.3.1 Performance Metrics . . . . .	42
2.3.2 Handling a Given Set of Jobs . . . . .	44
2.3.3 Using Preemption . . . . .	46
2.3.4 Priority Scheduling . . . . .	49

2.3.5	Starvation, Stability, and Allocations . . . . .	52
2.3.6	Fair Share Scheduling . . . . .	54
2.4	Summary . . . . .	55
	Bibliography . . . . .	56
<b>B</b>	<b>UNIX Processes</b>	<b>59</b>
	Bibliography . . . . .	64
<b>3</b>	<b>Concurrency</b>	<b>65</b>
3.1	Mutual Exclusion for Shared Data Structures . . . . .	66
3.1.1	Concurrency and the Synchronization Problem . . . . .	66
3.1.2	Mutual Exclusion Algorithms . . . . .	68
3.1.3	Semaphores and Monitors . . . . .	74
3.1.4	Locks and Disabling Interrupts . . . . .	77
3.1.5	Multiprocessor Synchronization . . . . .	80
3.2	Resource Contention and Deadlock . . . . .	81
3.2.1	Deadlock and Livelock . . . . .	81
3.2.2	A Formal Setting . . . . .	83
3.2.3	Deadlock Prevention . . . . .	85
3.2.4	Deadlock Avoidance . . . . .	86
3.2.5	Deadlock Detection . . . . .	90
3.2.6	Real Life . . . . .	90
3.3	Lock-Free Programming . . . . .	92
3.4	Summary . . . . .	93
	Bibliography . . . . .	94
<b>4</b>	<b>Memory Management</b>	<b>96</b>
4.1	Mapping Memory Addresses . . . . .	96
4.2	Segmentation and Contiguous Allocation . . . . .	98
4.2.1	Support for Segmentation . . . . .	99
4.2.2	Algorithms for Contiguous Allocation . . . . .	101
4.3	Paging and Virtual Memory . . . . .	104
4.3.1	The Concept of Paging . . . . .	104
4.3.2	Benefits and Costs . . . . .	107
4.3.3	Address Translation . . . . .	109
4.3.4	Algorithms for Page Replacement . . . . .	115
4.3.5	Disk Space Allocation . . . . .	120
4.4	Swapping . . . . .	121
4.5	Summary . . . . .	122
	Bibliography . . . . .	123

<b>5 File Systems</b>	<b>125</b>
5.1 What is a File? . . . . .	125
5.2 File Naming . . . . .	127
5.2.1 Directories . . . . .	127
5.2.2 Links . . . . .	130
5.2.3 Alternatives for File Identification . . . . .	130
5.3 Access to File Data . . . . .	131
5.3.1 Data Access . . . . .	132
5.3.2 Caching and Prefetching . . . . .	137
5.3.3 Memory-Mapped Files . . . . .	139
5.4 Storing Files on Disk . . . . .	141
5.4.1 Mapping File Blocks . . . . .	141
5.4.2 Data Layout on the Disk . . . . .	144
5.4.3 Reliability . . . . .	147
5.5 Summary . . . . .	149
Bibliography . . . . .	150
<b>C Mechanics of Disk Access</b>	<b>152</b>
C.1 Addressing Disk Blocks . . . . .	152
C.2 Disk Scheduling . . . . .	153
C.3 The Unix Fast File System . . . . .	154
Bibliography . . . . .	155
<b>6 Review of Basic Principles</b>	<b>156</b>
6.1 Virtualization . . . . .	156
6.2 Resource Management . . . . .	157
6.3 Reduction . . . . .	160
6.4 Hardware Support and Co-Design . . . . .	161
<b>III Crosscutting Issues</b>	<b>163</b>
<b>7 Identification, Permissions, and Security</b>	<b>164</b>
7.1 System Security . . . . .	164
7.1.1 Levels of Security . . . . .	165
7.1.2 Mechanisms for Restricting Access . . . . .	165
7.2 User Identification . . . . .	167
7.3 Controlling Access to System Objects . . . . .	168
7.4 Summary . . . . .	170
Bibliography . . . . .	171

<b>8 SMPs and Multicore</b>	<b>172</b>
8.1 Operating Systems for SMPs . . . . .	172
8.1.1 Parallelism vs. Concurrency . . . . .	172
8.1.2 Kernel Locking . . . . .	172
8.1.3 Conflicts . . . . .	172
8.1.4 SMP Scheduling . . . . .	172
8.1.5 Multiprocessor Scheduling . . . . .	172
8.2 Supporting Multicore Environments . . . . .	174
<b>9 Operating System Structure</b>	<b>175</b>
9.1 System Composition . . . . .	175
9.2 Monolithic Kernel Structure . . . . .	176
9.2.1 Code Structure . . . . .	176
9.2.2 Data Structures . . . . .	178
9.2.3 Preemption . . . . .	179
9.3 Microkernels . . . . .	179
9.4 Extensible Systems . . . . .	181
9.5 Operating Systems and Virtual Machines . . . . .	182
Bibliography . . . . .	184
<b>10 Performance Evaluation</b>	<b>185</b>
10.1 Performance Metrics . . . . .	185
10.2 Workload Considerations . . . . .	187
10.2.1 Statistical Characterization of Workloads . . . . .	188
10.2.2 Workload Behavior Over Time . . . . .	192
10.3 Analysis, Simulation, and Measurement . . . . .	193
10.4 Modeling: the Realism/Complexity Tradeoff . . . . .	195
10.5 Queueing Systems . . . . .	196
10.5.1 Waiting in Queues . . . . .	196
10.5.2 Queueing Analysis . . . . .	197
10.5.3 Open vs. Closed Systems . . . . .	203
10.6 Simulation Methodology . . . . .	204
10.6.1 Incremental Accuracy . . . . .	204
10.6.2 Workloads: Overload and (Lack of) Steady State . . . . .	205
10.7 Summary . . . . .	207
Bibliography . . . . .	208
<b>D Self-Similar Workloads</b>	<b>210</b>
D.1 Fractals . . . . .	210
D.2 The Hurst Effect . . . . .	212
Bibliography . . . . .	213
