2.2.5	Editors and Designers	10
2.2.6	Properties window.....	11
2.2.7	Build and Debug Tools	12
3	Introduction to Web Programming	13
3.1	Introduction.....	13
3.2	Web Browser	14
3.3	HTML.....	14
3.4	CSS	15
3.5	JavaScript.....	15

3.6	ASP.NET	16
3.7	AJAX/ ASP.NET AJAX	16
3.8	Silverlight	16
4	Introduction to ASP.NET	18
4.1	Introduction	18
4.2	ASP.NET Web Pages.....	20
4.3	ASP.NET SPA	20
4.4	ASP.NET MVC.....	20
4.5	ASP.NET Web Forms	21
5	ASP.NET Web Forms	22
5.1	Hello World Example	22
6	Internet Information Services (IIS).....	26
6.1	Web Server	26
7	Working with Databases in ASP.NET	27
7.1	Database Systems	27
7.1.1	Microsoft SQL Server.....	27
7.2	SQL.....	27
7.3	SQL Server + ASP.NET	29
7.3.1	Simple Database Example.....	29
7.4	ADO.NET	31
7.4.1	Example	31
8	Web Services	35
9	Example: Weather System.....	36

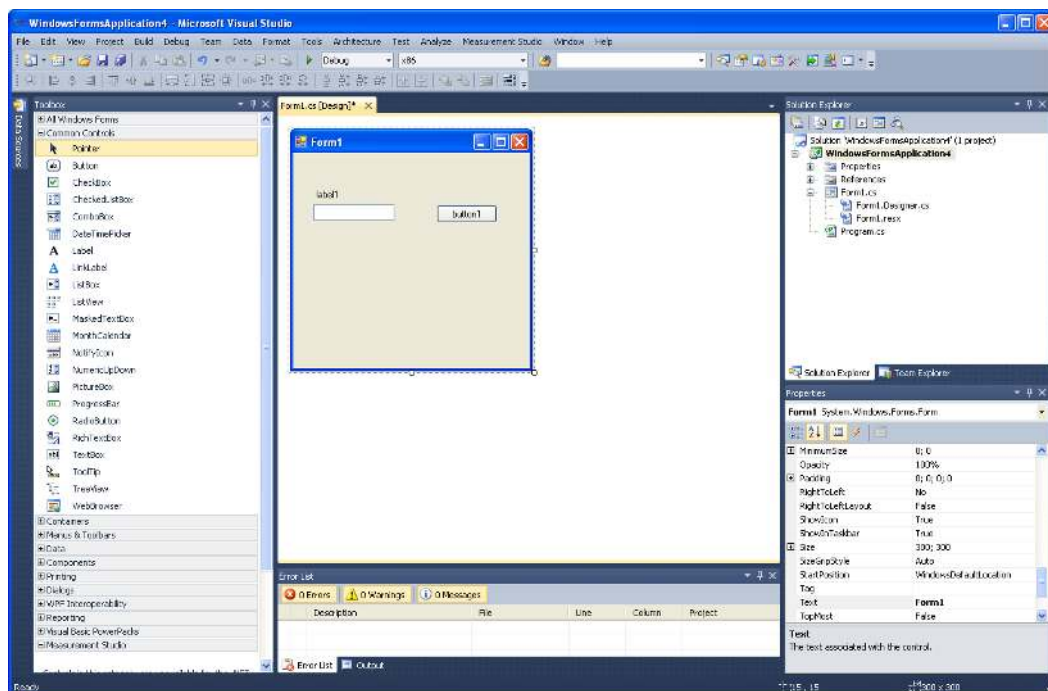

1 Introduction

ASP.NET is a framework for creating web sites, apps and services with HTML, CSS and JavaScript.

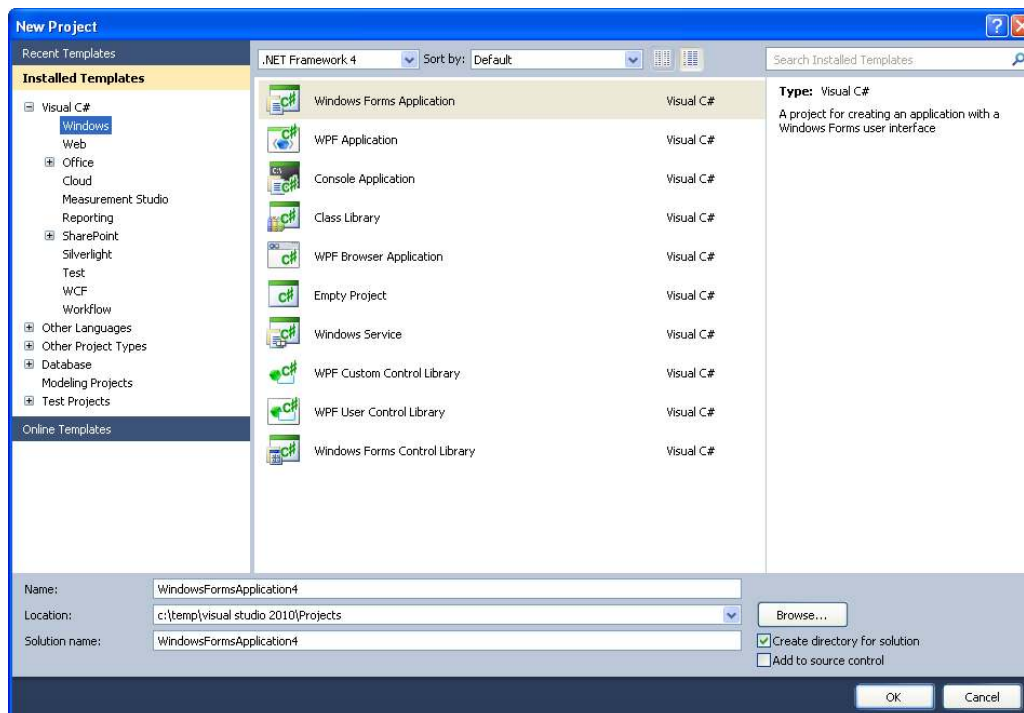

1.1 Visual Studio

Microsoft Visual Studio is an integrated development environment (IDE) from Microsoft. It can be used to develop console and graphical user interface applications along with Windows Forms applications, web sites, web applications, and web services in both native code together with managed code for all platforms supported by Microsoft Windows, Windows Phone, Windows CE, .NET Framework, .NET Compact Framework and Microsoft Silverlight.

Below we see the integrated development environment (IDE) in Visual Studio:

New projects are created from the “New Project” window:

1.2 C#

C# is pronounced “see sharp”. C# is an object-oriented programming language and part of the .NET family from Microsoft. C# is very similar to C++ and Java. C# is developed by Microsoft and works only on the Windows platform.

1.3 .NET Framework

The .NET Framework (pronounced “dot net”) is a software framework that runs primarily on Microsoft Windows. It includes a large library and supports several programming languages which allow language interoperability (each language can use code written in other languages). The .NET library is available to all the programming languages that .NET supports. Programs written for the .NET Framework execute in a software environment, known as the Common Language Runtime (CLR), an application virtual machine that provides important services such as security, memory management, and exception handling. The class library and the CLR together constitute the .NET Framework.

1.4 Object-Oriented Programming (OOP)
