## Microsoft Office: Access 2016 for Windows Relational Databases & Subforms

### Table of Contents

Introduction .....	4
Learning Objectives.....	4
Relationships and Tables .....	5
Using Multiple Tables in the Access Database .....	5
Relationships Explained .....	6
Relationships and Data Types.....	6
How to Create the Relationship.....	7
Relationships and Forms.....	10
Creating a Form for a Two Table Relationship .....	10
Creating a Form with Tabs for a Multi-Table Relationship.....	15
Create the Main Form for your Customer Info Table.....	16
Additional Help .....	21

## Introduction

*Microsoft Access* allows people to effectively and efficiently organize data. This document has been developed to show you how to use multiple tables and relational databases in *Access 2016*. The various sections presented in this document will help you to build a solid knowledge foundation of the software.

The Microsoft Access Booklet Series will provide you the necessary knowledge on how to use *Microsoft Office Access 2016*. Before reading this booklet, it is recommended that you read the following *Access 2016* documents on the UITS Documentation Center at <http://uits.kennesaw.edu/cdoc>:

- Microsoft Access 2016 – Intro to Access
- Microsoft Access 2016 – Intro to Forms

## Learning Objectives

The following objectives are covered in this document:

- Understanding the concept of relationships as they relate to tables.
- Knowing how to define data types for relationships.
- Having the ability to create a relationship.
- Understanding relationships and forms.
- Knowing how to create a form for a two table relationship.
- Knowing how to create a tab form for a multi-table relationship.

## Relationships and Tables

The power of *Access* is the software's ability to create and maintain multiple tables. *Access* allows multiple tables to work together thereby giving you strong database management capabilities.

### Using Multiple Tables in the Access Database

Users of *Access* begin to utilize the full strength of the system when they use multiple tables to manage data. For example, the following are two tables that could be used by a retail store that sells products to customers.

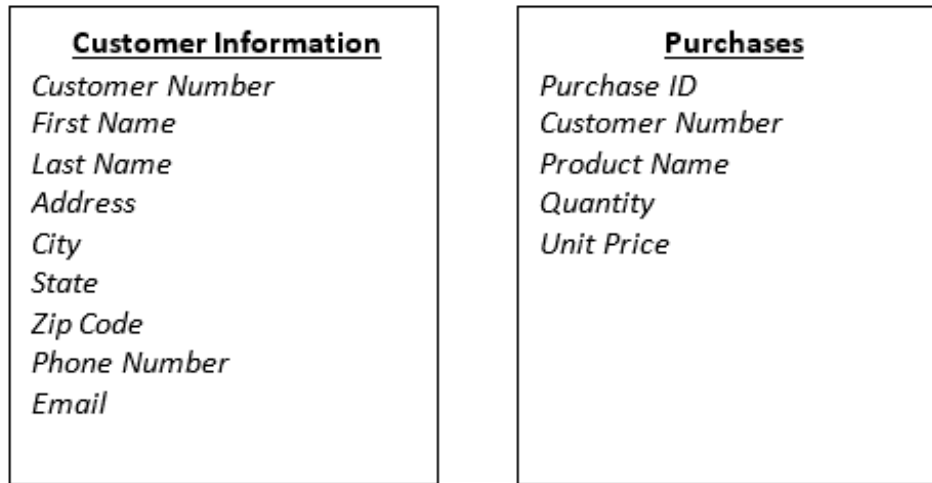

Figure 1 - Two Tables

It would be ineffective to attempt to include all of the fields presented in *Figure 1* in one table. It is much more efficient to create two tables and categorize the various fields within these tables.

An effective database used by a business, educational facility, governmental agency, etc. would ultimately have many tables.
