Contents

Preface to the Third Edition xi

1. First-Order Differential Equations 1
- 1.1 First-Order Equations 2
  - 1.1.1 Notation and Terminology 2
  - 1.1.2 Growth–Decay Models 6
  - 1.1.3 Geometric Approach 11
- 1.2 Antiderivatives 16
- 1.3 Separable Equations 22
  - 1.3.1 Separation of Variables 22
  - 1.3.2 Heat Transfer 31
  - 1.3.3 Chemical Reactors 32
- 1.4 Linear Equations 36
  - 1.4.1 Integrating Factors 36
  - 1.4.2 Applications 44
  - 1.4.3 Electrical Circuits 50
- 1.5 One-Dimensional Dynamical Systems 54
  - 1.5.1 Autonomous Equations 55
  - 1.5.2 Bifurcation 67
  - 1.5.3 Existence of Solutions 73

2. Second-Order Linear Equations 79
- 2.1 Classical Mechanics 79
  - 2.1.1 Oscillations and Dissipation 80
- 2.2 Equations with Constant Coefficients 85
  - 2.2.1 The General Solution 86

2.2.2 Real Eigenvalues 89
2.2.3 Complex Eigenvalues 90
2.2.4 Applications 94
2.3 Nonhomogeneous Equations 100
2.3.1 Undetermined Coefficients 101
2.3.2 Resonance 112
2.4 Equations with Variable Coefficients 116
2.4.1 Cauchy–Euler Equations 117
2.4.2 Variation of Parameters 120
2.4.3 Reduction of Order* 124
2.5 Higher-Order Equations* 127
2.6 Steady–State Heat Conduction* 130

3. Laplace Transforms 137
3.1 Definition and Basic Properties 138
3.2 Differential Equations 147
3.2.1 Initial Value Problems 148
3.3 The Convolution Property 160
3.4 Impulsive Sources 164

4. Linear Systems 177
4.1 Linear Systems vs. Second-Order Equations 178
4.2 Matrices and Linear Systems 191
4.2.1 Preliminaries from Algebra 191
4.2.2 Differential Equations and Equilibria 199
4.3 The Eigenvalue Problem 202
4.4 Solving Linear Systems 208
4.4.1 Real Unequal Eigenvalues 208
4.4.2 Complex Eigenvalues 219
4.4.3 Real, Equal Eigenvalues 222
4.5 Phase Plane Analysis 225
4.6 Nonhomogeneous Systems 241

5. Nonlinear Systems 247
5.1 Linearization 248
5.2 Nonlinear Mechanics 259
5.3 Applications 272
5.3.1 The Lotka–Volterra Model 272
5.3.2 Population Ecology 276
5.3.3 Epidemics; Chemical kinetics 285
5.3.4 Malaria* 295
5.4 Advanced Techniques 302
