About.....	1
<b>Chapter 1: Getting started with Python Language.....</b>	<b>2</b>
Remarks.....	2
Versions.....	3
Python 3.x.....	3
Python 2.x.....	3
Examples.....	4
Getting Started.....	4
Verify if Python is installed.....	4
<b>Hello, World in Python using IDLE.....</b>	<b>5</b>
Hello World Python file.....	5
<b>Launch an interactive Python shell.....</b>	<b>6</b>
<b>Other Online Shells.....</b>	<b>7</b>
<b>Run commands as a string.....</b>	<b>7</b>
<b>Shells and Beyond.....</b>	<b>8</b>
Creating variables and assigning values.....	8
User Input.....	12
IDLE - Python GUI.....	13
Troubleshooting.....	14
Datatypes.....	15
<b>Built-in Types.....</b>	<b>15</b>
Booleans.....	15
Numbers.....	15
Strings.....	16
Sequences and collections.....	16
<b>Built-in constants.....</b>	<b>17</b>
<b>Testing the type of variables.....</b>	<b>18</b>
<b>Converting between datatypes.....</b>	<b>18</b>
<b>Explicit string type at definition of literals.....</b>	<b>19</b>

<b>Mutable and Immutable Data Types</b> .....	<b>19</b>
Built in Modules and Functions.....	20
Block Indentation.....	24
<b>Spaces vs. Tabs</b> .....	<b>25</b>
Collection Types.....	25
Help Utility.....	30
Creating a module.....	31
String function - str() and repr().....	32
repr().....	33
str().....	33
Installing external modules using pip.....	34
<b>Finding / installing a package</b> .....	<b>34</b>
<b>Upgrading installed packages</b> .....	<b>34</b>
<b>Upgrading pip</b> .....	<b>35</b>
Installation of Python 2.7.x and 3.x.....	35
<b>Chapter 2: *args and **kwargs</b> .....	<b>38</b>
Remarks.....	38
<b>h11</b> .....	<b>38</b>
<b>h12</b> .....	<b>38</b>
<b>h13</b> .....	<b>38</b>
Examples.....	39
Using *args when writing functions.....	39
Using **kwargs when writing functions.....	39
Using *args when calling functions.....	40
Using **kwargs when calling functions.....	41
Using *args when calling functions.....	41
Keyword-only and Keyword-required arguments.....	42
Populating kwarg values with a dictionary.....	42
**kwargs and default values.....	42
<b>Chapter 3: 2to3 tool</b> .....	<b>43</b>
Syntax.....	43

Parameters.....	43
Remarks.....	44
Examples.....	44
Basic Usage.....	44
Unix.....	44
Windows.....	44
Unix.....	45
Windows.....	45
<b>Chapter 4: Abstract Base Classes (abc).....</b>	<b>46</b>
Examples.....	46
Setting the ABCMeta metaclass.....	46
Why/How to use ABCMeta and @abstractmethod.....	47
<b>Chapter 5: Abstract syntax tree.....</b>	<b>49</b>
Examples.....	49
Analyze functions in a python script.....	49
<b>Chapter 6: Accessing Python source code and bytecode.....</b>	<b>51</b>
Examples.....	51
Display the bytecode of a function.....	51
Exploring the code object of a function.....	51
Display the source code of an object.....	51
Objects that are not built-in.....	51
Objects defined interactively.....	52
Built-in objects.....	52
<b>Chapter 7: Alternatives to switch statement from other languages.....</b>	<b>54</b>
Remarks.....	54
Examples.....	54
Use what the language offers: the if/else construct.....	54
Use a dict of functions.....	54
Use class introspection.....	55
Using a context manager.....	56
<b>Chapter 8: ArcPy.....</b>	<b>58</b>
Remarks.....	58

Examples.....	58
Printing one field's value for all rows of feature class in file geodatabase using Search .....	58
createDissolvedGDB to create a file gdb on the workspace.....	58
<b>Chapter 9: Arrays.....</b>	<b>59</b>
Introduction.....	59
Parameters.....	59
Examples.....	59
Basic Introduction to Arrays.....	59
Access individual elements through indexes.....	60
Append any value to the array using append() method.....	61
Insert value in an array using insert() method.....	61
Extend python array using extend() method.....	61
Add items from list into array using fromlist() method.....	61
Remove any array element using remove() method.....	61
Remove last array element using pop() method.....	62
Fetch any element through its index using index() method.....	62
Reverse a python array using reverse() method.....	62
Get array buffer information through buffer_info() method.....	62
Check for number of occurrences of an element using count() method.....	62
Convert array to string using tostring() method.....	63
Convert array to a python list with same elements using tolist() method.....	63
Append a string to char array using fromstring() method.....	63
<b>Chapter 10: Asyncio Module.....</b>	<b>64</b>
Examples.....	64
Coroutine and Delegation Syntax.....	64
Asynchronous Executors.....	65
Using UVLoop.....	66
Synchronization Primitive: Event.....	66
<b>Concept.....</b>	<b>66</b>
<b>Example.....</b>	<b>66</b>
A Simple Websocket.....	67
Common Misconception about asyncio.....	68
