

CakePHP

CakePHP Cookbook Documentation

Release 3.7

Cake Software Foundation

Feb 14, 2019

Contents

1	CakePHP at a Glance	1
	Conventions Over Configuration	1
	The Model Layer	1
	The View Layer	2
	The Controller Layer	2
	CakePHP Request Cycle	3
	Just the Start	4
	Additional Reading	4
2	Quick Start Guide	11
	Content Management Tutorial	11
	CMS Tutorial - Creating the Database	13
	CMS Tutorial - Creating the Articles Controller	16
3	3.0 Migration Guide	25
	Requirements	25
	Upgrade Tool	25
	Application Directory Layout	26
	CakePHP should be installed with Composer	26
	Namespaces	26
	Removed Constants	26
	Configuration	26
	New ORM	27
	Basics	27
	Debugging	27
	Object settings/configuration	27
	Cache	27
	Core	28
	Console	29
	Shell / Task	29
	Event	30
	Log	30
	Routing	31
	Network	33

Sessions	33
Network\Http	34
Network>Email	34
Controller	34
Controller\Components	36
Model	37
TestSuite	39
View	39
View\Helper	41
I18n	45
L10n	46
Testing	46
Utility	46
4 Tutorials & Examples	51
Content Management Tutorial	51
CMS Tutorial - Creating the Database	53
CMS Tutorial - Creating the Articles Controller	56
CMS Tutorial - Tags and Users	64
CMS Tutorial - Authentication	72
Bookmarker Tutorial	78
Bookmarker Tutorial Part 2	84
Blog Tutorial	91
Blog Tutorial - Part 2	94
Blog Tutorial - Part 3	105
Blog Tutorial - Authentication and Authorization	111
5 Contributing	119
Documentation	119
Tickets	127
Code	127
Coding Standards	130
Backwards Compatibility Guide	141
6 Installation	145
Requirements	145
Installing CakePHP	146
Permissions	147
Development Server	148
Production	149
Fire It Up	149
URL Rewriting	149
7 Configuration	155
Configuring your Application	155
Additional Class Paths	158
Inflection Configuration	158
Environment Variables	159
Configure Class	159
Reading and writing configuration files	161
Bootstrapping CakePHP	163
Disabling Generic Tables	164
8 Routing	165
Quick Tour	165

Connecting Routes	167
Connecting Scoped Middleware	179
RESTful Routing	181
Passed Arguments	184
Generating URLs	185
Redirect Routing	186
Entity Routing	186
Custom Route Classes	187
Creating Persistent URL Parameters	188
Handling Named Parameters in URLs	189
9 Request & Response Objects	195
Request	195
Response	203
Setting Cookies	210
Setting Cross Origin Request Headers (CORS)	210
Common Mistakes with Immutable Responses	211
Cookie Collections	211
10 Controllers	213
The App Controller	213
Request Flow	214
Controller Actions	214
Interacting with Views	215
Redirecting to Other Pages	217
Loading Additional Models	219
Paginating a Model	219
Configuring Components to Load	220
Configuring Helpers to Load	220
Request Life-cycle Callbacks	220
More on Controllers	221
11 Views	263
The App View	263
View Templates	264
Using View Blocks	267
Layouts	269
Elements	271
View Events	274
Creating Your Own View Classes	274
More About Views	275
12 Database Access & ORM	377
Quick Example	377
More Information	379
13 Caching	535
Configuring Cache Engines	536
Writing to a Cache	539
Reading From a Cache	540
Deleting From a Cache	541
Clearing Cached Data	542
Using Cache to Store Counters	542
Using Cache to Store Common Query Results	542
Using Groups	543
